

AEM Training Evaluation

AEM Training Evaluation

Case Study (21th Nov – 3rd Dec)

1. Day 1: Case Study Allocation
2. Day 1-8: Associate to complete the implementation of Case Study
3. Day 9: Associate to Demo the Case Study to Panel
 1. Project Setup
 2. Implementation of Requirement
 3. Implementation of Best Practices
 4. Code Quality
 5. Innovation
 6. Presentation

Use Case 1

Educational Institute Site

Create an educational institute website having details about the Institute and different courses available at that institute.

Objective : To understand and Apply knowledge of AEM **Templates, Components, Content Fragments, Experience Fragments, Sling Models, OSGI Services, Tags and Taxonomies, Sightly** and **Core Components**.

Educational Institute Site

Create Content Fragments For Courses

- Capture Course details in content fragment. Create 10-15 content fragment for different courses.
- Each course should have Course Title, Course Description, Start - End date and Course Category (tag). Create Custom Content Fragment Model.
- Create all these content fragment under a specific root folder in DAM.

Create Available Courses Page

- Component to Display list of Courses. (display all details captured in CF)
- Component should have option to limit no of courses to be displayed.
- Component Should have Option to filter Courses based on Category.
- Use Sling Model for the component to fetch all CF details. Keep root dam path configurable in OSGI Service. Use this OSGI Service in Sling Model.

Create Header and Footer Components

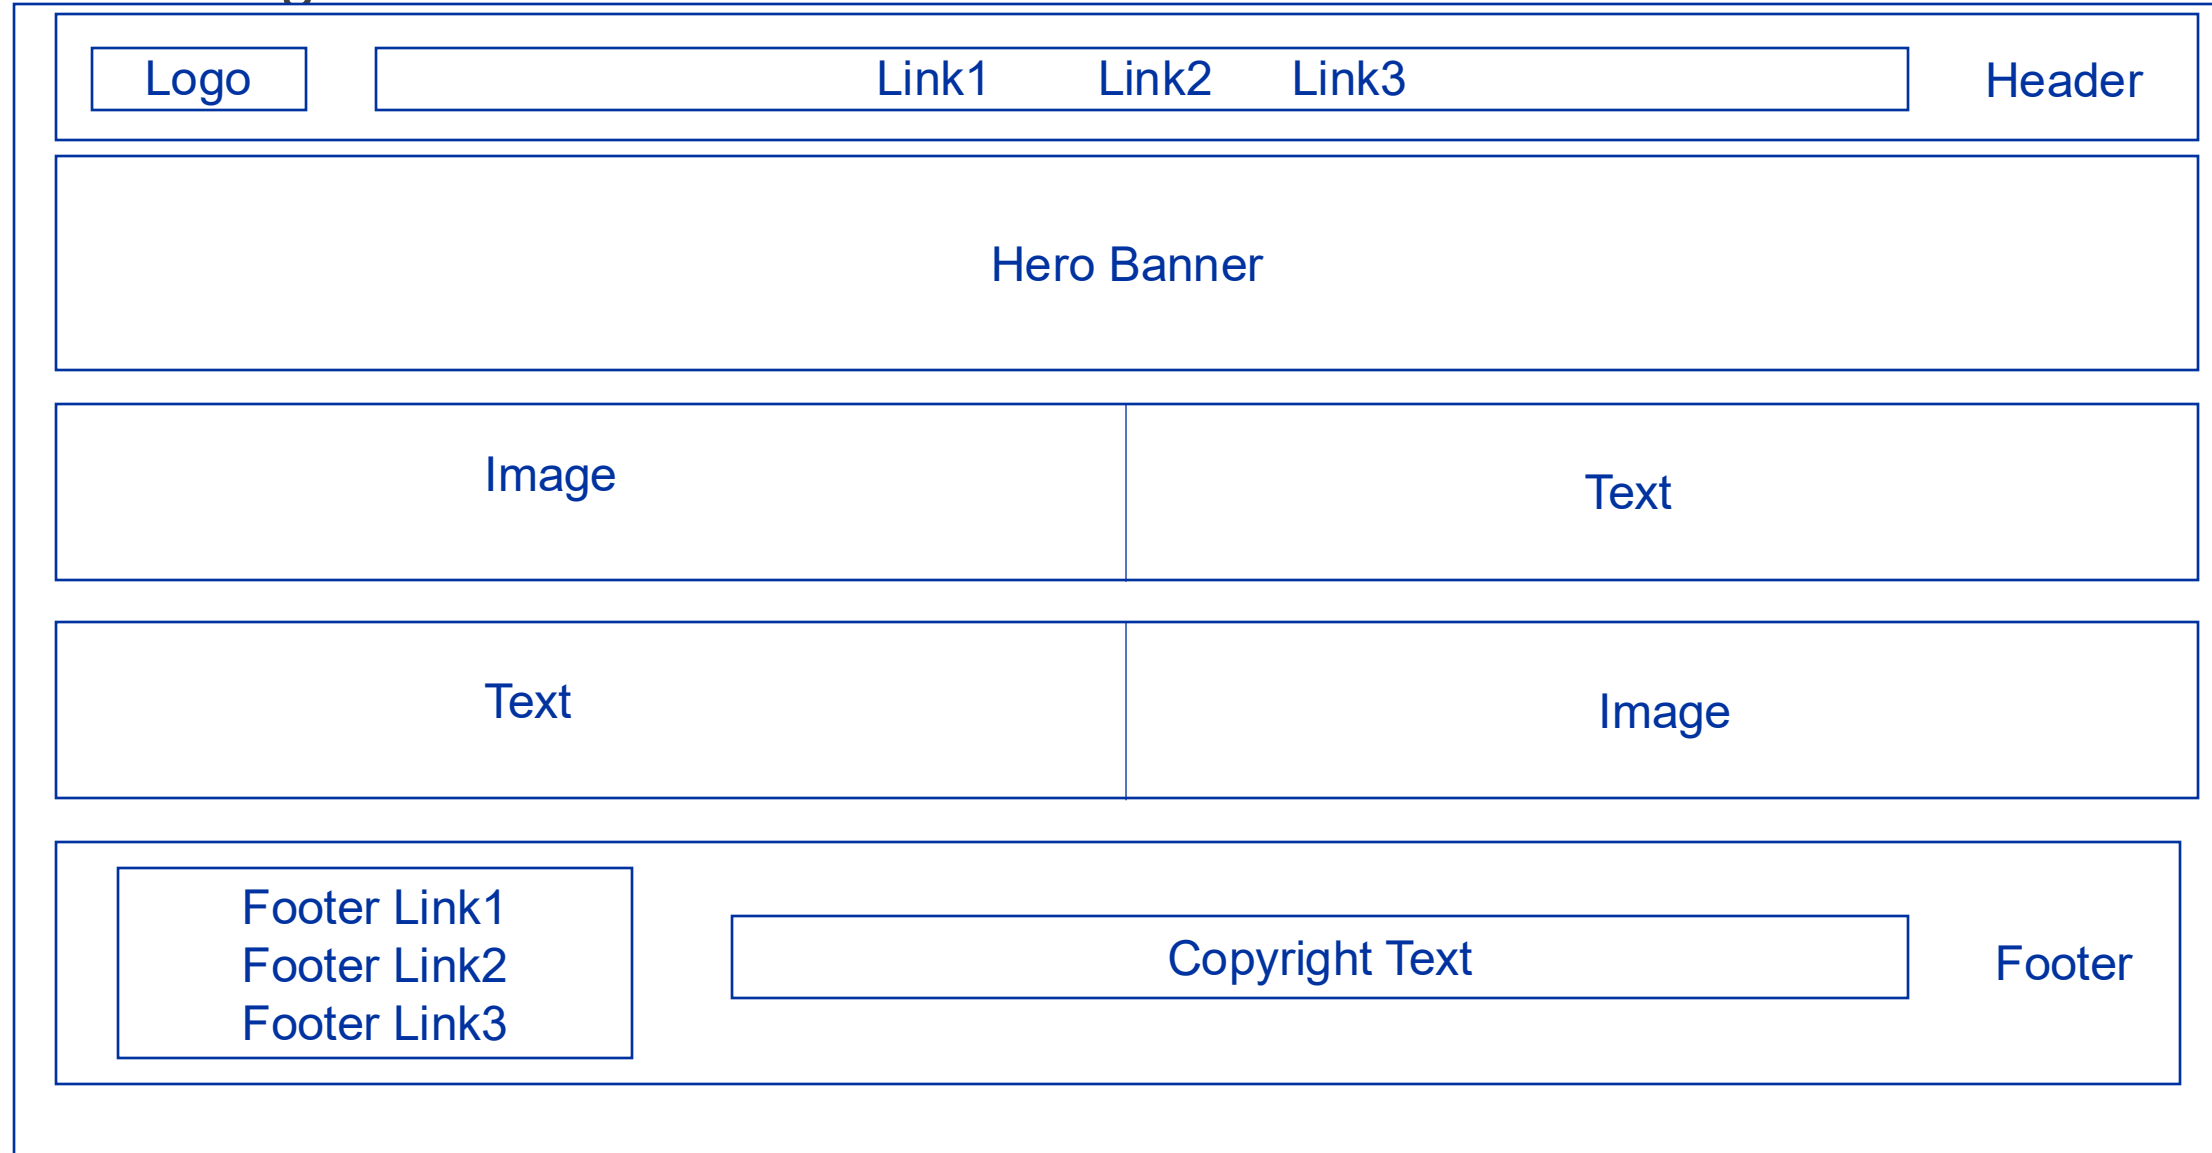

- Header : Fields for Logo and Navigation Links (multifield).
- Footer : Fields for Footer Links (multifield) and Copyright Text.
- Header and Footer should be common across all pages, these should be managed using Experience Fragments.
- This Header and footer should be editable by only few set of admin users. Create Users and Groups to achieve this and provide permissions accordingly.

Create Home, About Us and Contact Us Page

- **Home Page** : Use OOTB Core component to have one Hero Banner, Few Image and text component highlighting main details about the Institute
- **About Us** : Use OOTB Core components to build About us page having details about institute such as Establishment date, History with milestones, any other highlights.
- **Contact Us** : Use OOTB Core components to build Contact Us page having details how one can contact the institute (Address, Phone Number, Email, Fax Details).
- Create one or multiple Templates according to the requirements.

Use Case 2

Travel & Tourism Website

Create a travel and tourism website having details about different destinations and activities which can be done at those destination.

Objective : To understand and Apply knowledge of AEM Templates, Components, Sling Models, Query Builder, Tags and Taxonomies, Sightly, Different APIs and Core Components

Travel and Tourism Website

Create Destination Pages

- Create multiple destination pages under one root destination page.
- Each Destination page should have one destination component which will capture Destination Title , Description and Image,. Add brief summary in the description.
- Use other OOTB components to add additional information about the destination such as general weather, Modes of transportation to reach there etc.
- At the end of the pages create an Activity Summary Component where you can select the activities which can be done at that destination.
- For each activity there will be a different page. As part of activity summary component create a configurable multiselect where you can choose the activity page.
- Activity Summary component will show only the Title of the Activity and on click of that title user should be redirected to an activity detail page.
- Create tags for different activities and tag each destination page with those activity tags.

Create Activity Page

- Page should have details of the activity.
- Use OOTB core components to build the pages and author details such as Activity title , Activity Description and one or multiple images/videos for the activity.

Create Explore Destinations Component.

- As part of the component keep root destination page configurable.
- It should read each destination page (destination component authored on the respective page) under the configured root page and show card having Title, Description and Image for each destination.
- No of destination to show should be configurable. If not configured all destinations would be shown.
- Option to filter destination based on activity should be present. This should be managed using tags. To filter use tag field. Fetch all destinations for respective activity tag. Destination pages should already be tagged with activity tags.
- On click of each destination card it should redirect to destination detail page.

Create Home Page

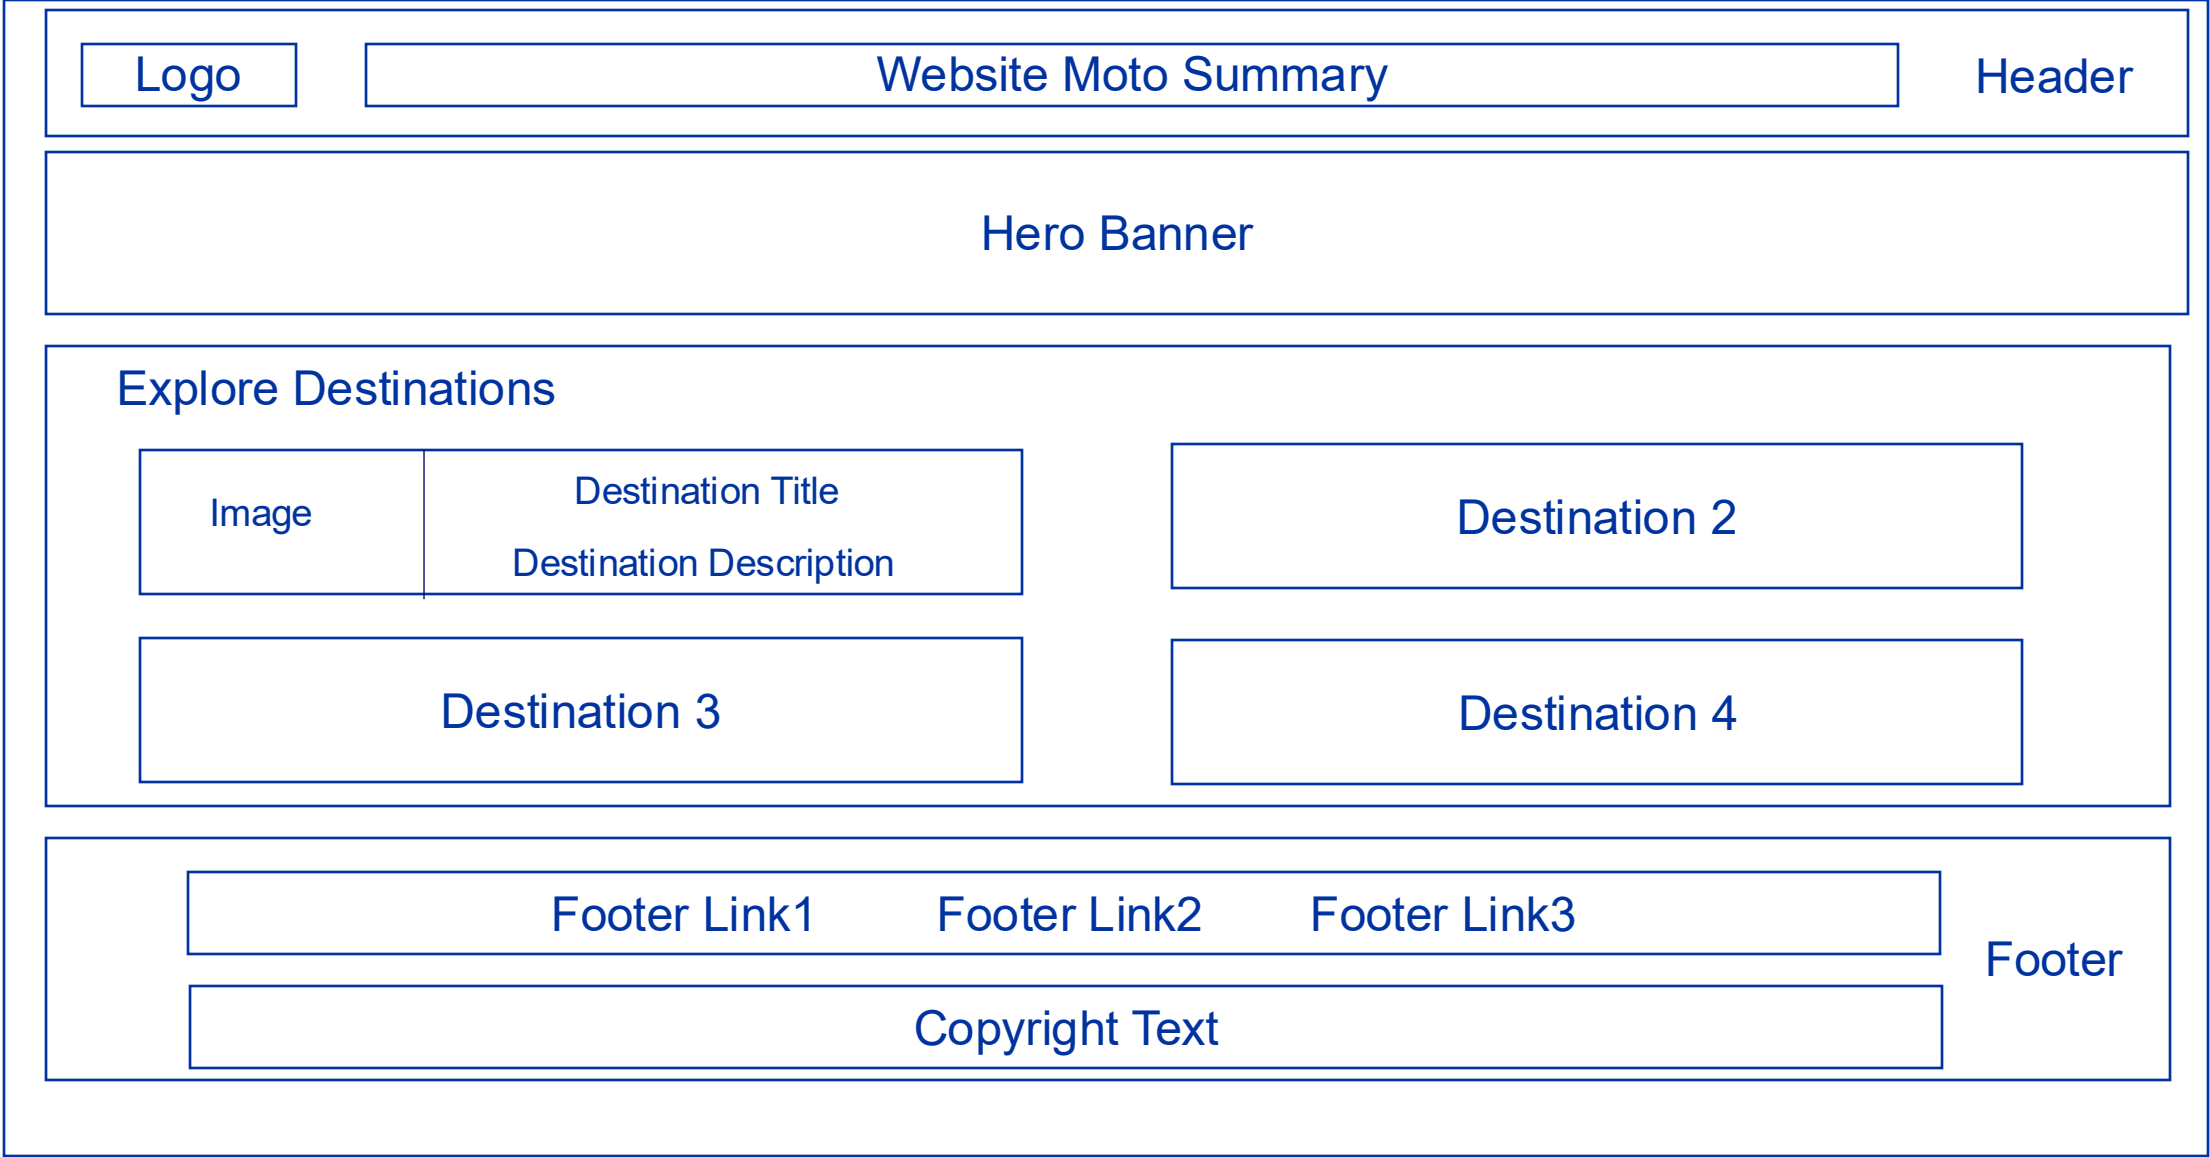

- Add banner component : use OOTB core component.
- Add Explore Destinations component below Banner.

Create Header and Footer Components

- Header : Fields for Logo and Website moto Statement.
- Footer : Fields for Footer Links (multifield) and Copyright Text.
- Header and Footer should be common across all pages, these should be managed using Experience Fragments

Activity Page

Objective : To understand and Apply knowledge of AEM **Templates, Components, Content Fragments, Experience Fragments, Sling Models, OSGI Services, Tags and Taxonomies, Sightly** and **Core Components**.

Use Case 3

Restaurant Website

Customer wants to develop a restaurant website having details of Food Menu.

Restaurant Website

Objective : To understand and Apply knowledge of AEM **Templates, Components, Experience Fragments, Sling Models, OSGI Services, Tags and Taxonomies, HTL, Assets, Touch UI Event Listeners-Validators and Core Components.**

Experience Fragments:

- Header Experience Fragment: Should Contain two Tabs: Home, Menu. Menu must link to sub menus . For e.g., Chinese, Indian Pages.
- Footer should contain Hyperlinks to Contact Us Page and Copy Right Text

Home Page:

- Image Component or Hero Image Banner Component can be authored. You may leverage default core components or create a custom component.
- Component containing info About Restaurant Such as Name, GST number, Address, Telephone Numbers, Email Address. Create a custom component for same. Add validations for number and email fields. All the above fields are mandatory. Use event listeners, validators and granite UI properties for validation

Restaurant Website

Cuisine Page:

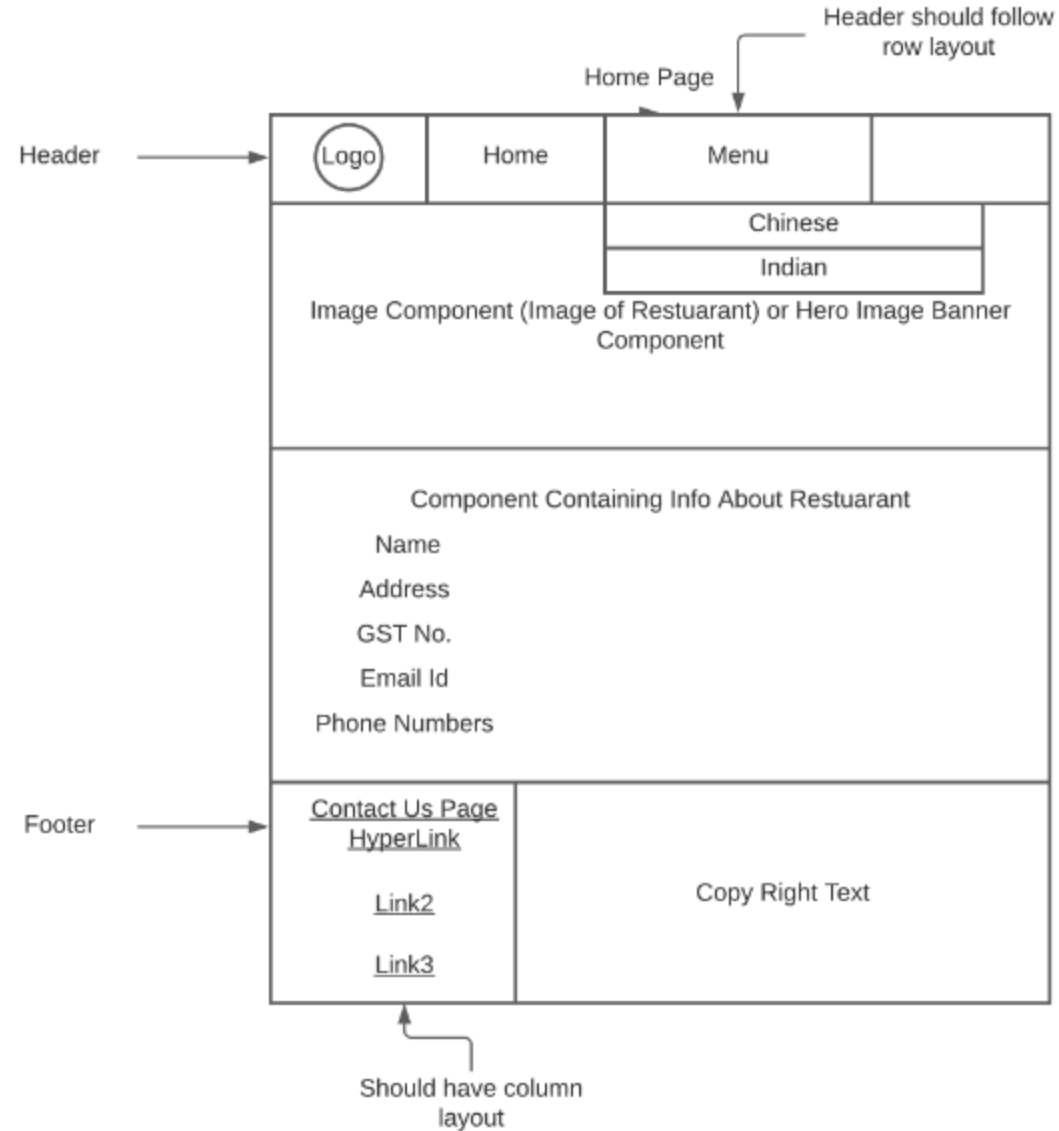

- Image Component or Hero Image Banner Component can be authored. You may leverage default core components or create a custom component.
- Component containing hyperlink of all Cuisine Dishes (For e.g., All Chinese Dishes)
Write a custom component for Same. Either use Sling Model or Sling Servlet to Display the list of cuisines pages.

Dish Page:

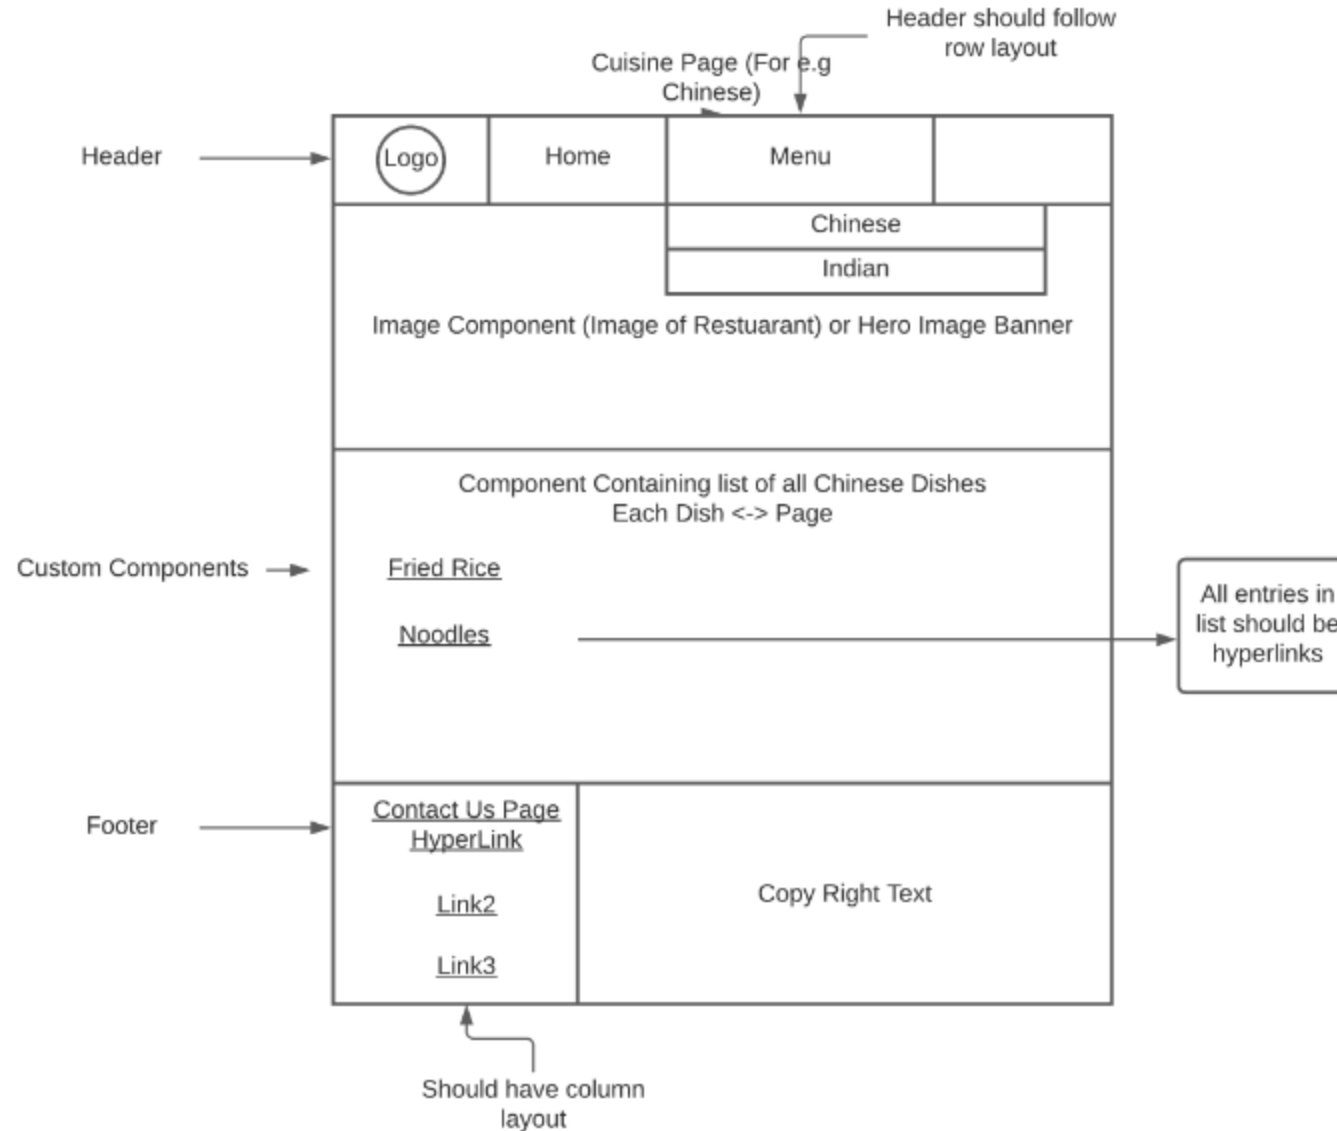

- Image Component or Hero Image Banner Component can be authored. You may leverage default core components or create a custom component.
- Component containing detail of Dish. For e.g., Dish Name, Dish Ingredients, Dish Cost .
All fields are mandatory. Dish Cost/Price cannot be Zero.
- Note: Make use of AEM Templates, Components, AEM assets, AEM Tags and Taxonomies.

Use Case 4

A Spa & Salon Website

Create a website for a beauty salon network to display the types of services provided and the stores details.

Objective : To understand and Apply knowledge of AEM Templates, Components, Sling Models, Tags and Taxonomies, Sightly, Different APIs, Content Fragments, Experience Fragments and Core Components

A Beauty Salon Website

Create Header and Footer Components

- **Header** : Fields for Logo and Navigation Links (multifield).
- **Footer** : Copyright Text, Contact Number & email Address and social share links.
- Header and Footer should be common across all pages, these should be managed using Experience Fragments.

Create Home, About Us, Stores and Services Pages

- **Home Page** : Use OOTB Core component to have one Hero Banner, Few Image and text component highlighting main details of the salon and deals.
- **About Us** : Use OOTB Core components to build About us page having details about Salon's origin, Establishment date, History with milestones, any other highlights.
- **Stores** : Use OOTB Core components to display multiple store locations each as tile/tab.
- **Services Available**: Have a service category page which lists all the services under specific category and clicking on each service open the service details page. Use Content fragment to create service details.

Create Content Fragments For Services

- Capture Service details in content fragment. Create 7 to 10 content fragment for different services.
- Each service should have a Title, Service Description, Duration in minutes/hours, benefits. Create Custom Content Fragment Model.
- Create all these content fragment under a specific root folder in DAM.

Create Available Services Page

- Component to Display list of Service categories. (display all details captured in CF)
- Display two or three services under each category.
- Component Should have Option to filter services based on Category.
- Use Sling Model for the component to fetch all CF details. Keep root dam path configurable in OSGI Service. Use this OSGI Service in Sling Model.

Services Page

Use Case 5

A Telecom Service Provider Website

Create a website for a Telecom service provider to display the list of plans available for different types of their products.

Objective : To understand and Apply knowledge of AEM Templates, Components, Scheduler, Experience Fragments, Sling Models, OSGI Config and Services, Sightly and Core Components.

Telecom service provider site

Create Header and Footer Components

- Header : Fields for Logo and Navigation Links – icons to be displayed for links (multifield).
- Footer : Fields for Footer Links (multifield) and Copyright Text.
- Header and Footer should be common across all pages, these should be managed using Experience Fragments.
- This Header and footer should be editable by only few set of admin users. Create Users and Groups to achieve this and provide permissions accordingly.

Create Products Landing Page

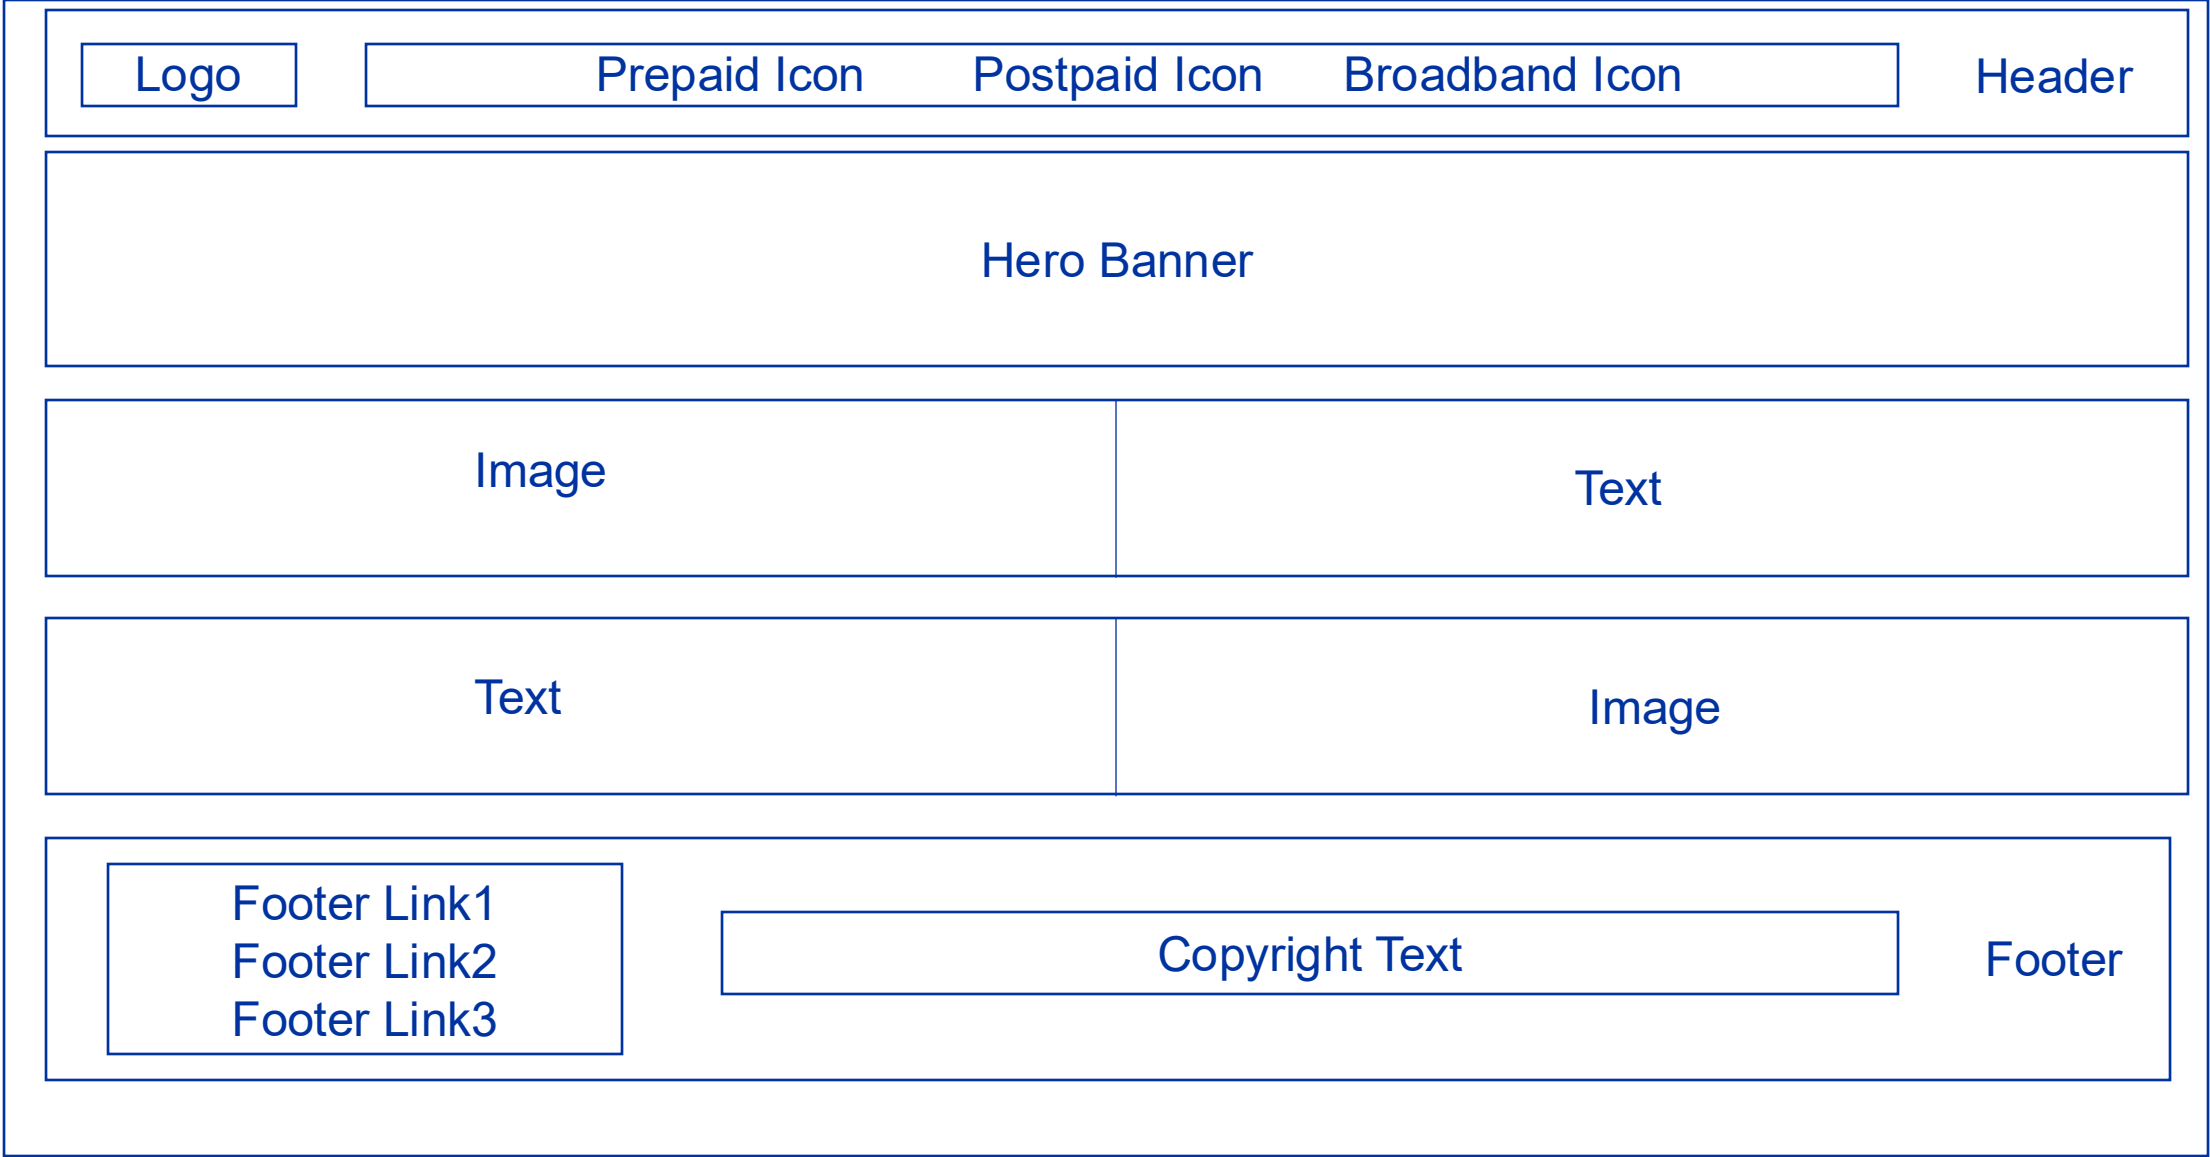

- Create three different product landing pages for Prepaid, Post-paid and Broadband services.
- Create a scheduler to read a CSV file/feed with plans available for each product and create the plans as child pages of the specific category. Keep the csv file in DAM path.
- Create OSGI configuration for scheduler – name, cron job scheduler timing details.
- In the product landing page, display a banner with image, product name and benefits. Below this section, display the different plan details with name, cost, validity, benefits, added advantage, offers available for each plan.
- Each plan will be displayed as a card component. Limit the display to 4 cards on first load, provide see more button to load the additional plans on clicking on it.
- Use Sling Model for the component to fetch all plan details and to populate in card component.

Create Home, About Us and Contact Us Page

- **Home Page** : Use OOTB Core component to have one Hero Banner, Few Image and text component highlighting main details about the service provider.
- **About Us** : Use OOTB Core components to build About us page having details about the service provider such as Establishment date, number of services provided, consumer count, different services provided, any other highlights.
- **Contact Us** : Use OOTB Core components to build Contact Us page having details how one can contact the service provider (Address, Phone Number, Email, Fax Details).
- Create one or multiple Templates according to the requirements.

Use Case 6

My Task Website

Develop a My Task Site where user can store and maintain their Tasks

Objective : To understand and Apply knowledge of AEM **Templates, Components, Experience Fragments, Sling Models, OSGI Services, Multifield, HTL, Sling Servlet, Collections** and **Core Components**.

Experience Fragments

- Header Experience Fragment: Should Contain one Tab: Home
- Footer should contain Hyperlinks to Contact Us Page and Copy Right Text

Home Page

- Custom Component1 to Add Task. A Task will have Task Name, Category and Description. Use Component1 to author Labels for each fields and to store categories as multifield. On click of Add Button save Task. Save the details either in Browser Session or write a backend Sling servlet to save details in backend in a List of task objects, use Ajax call to save details in backend. After Add operation, refresh the page.
Initial status of Task is Active, user can mark Task as completed by going to Task page
- Custom Component2 to View Task Creates. Author can author the title of each column. Use Sling servlet or Sling Model to display details in Table format.

My Task Website

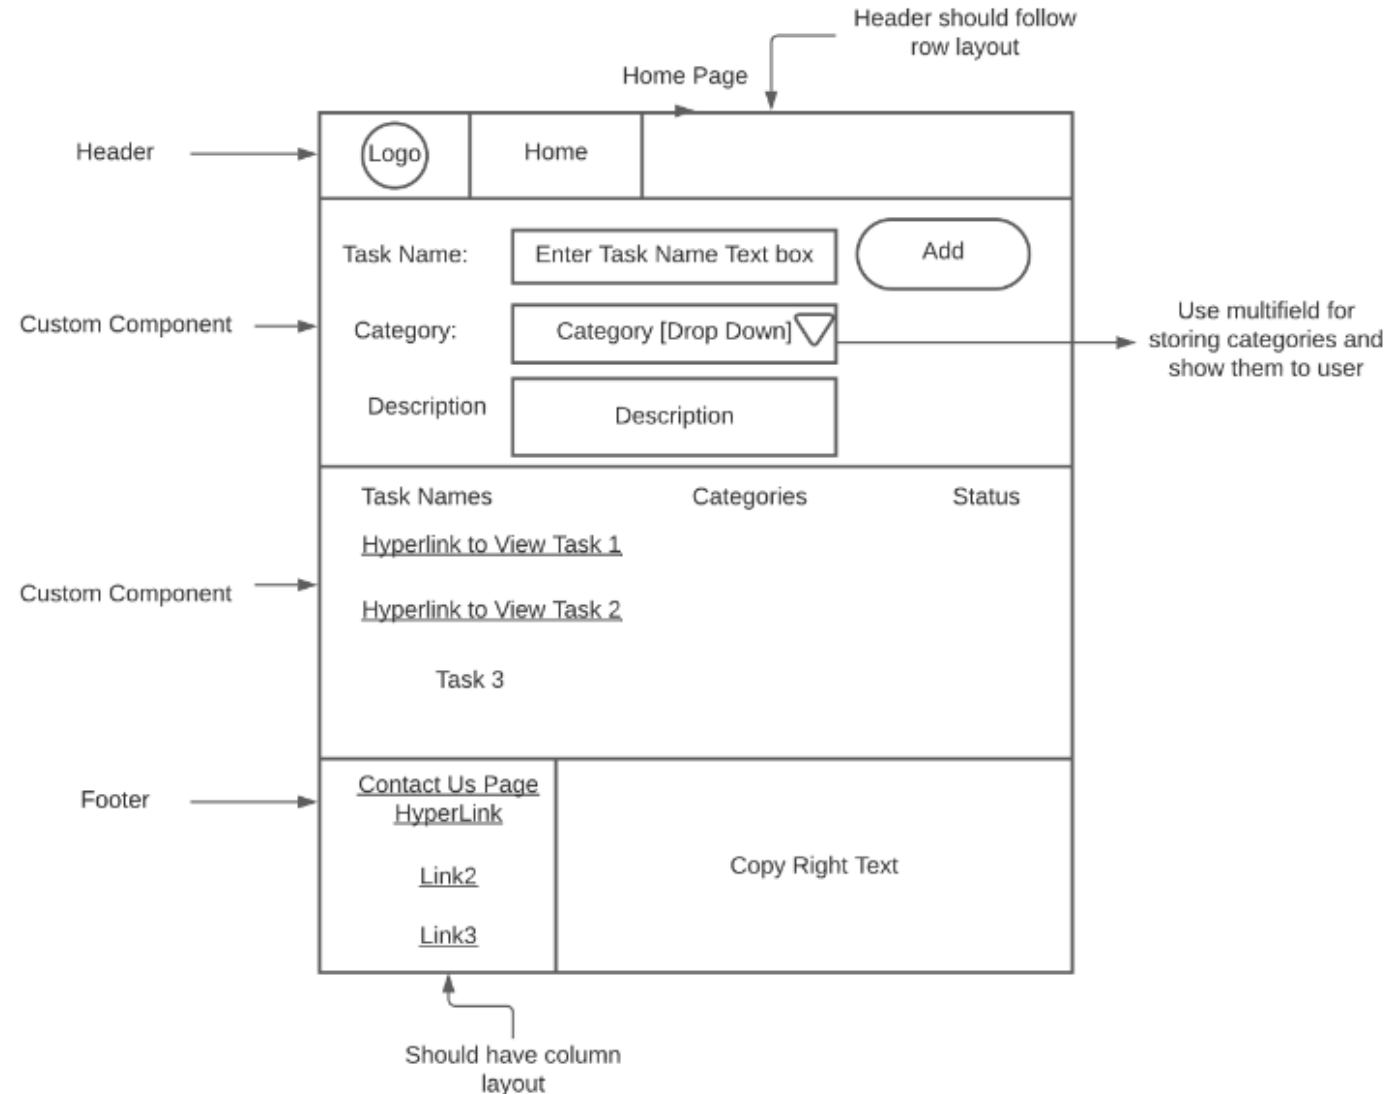

Individual Task Page

- To Show details of Individual Task including Description. Pass the Task Name or Task Id as query param while invoking Task Page from Home Page. Use the Task Id/Task Name to fetch details of Tasks and show in frontend.
- To Mark Task as completed on clicking button.
- All Labels and button name should be authorable.

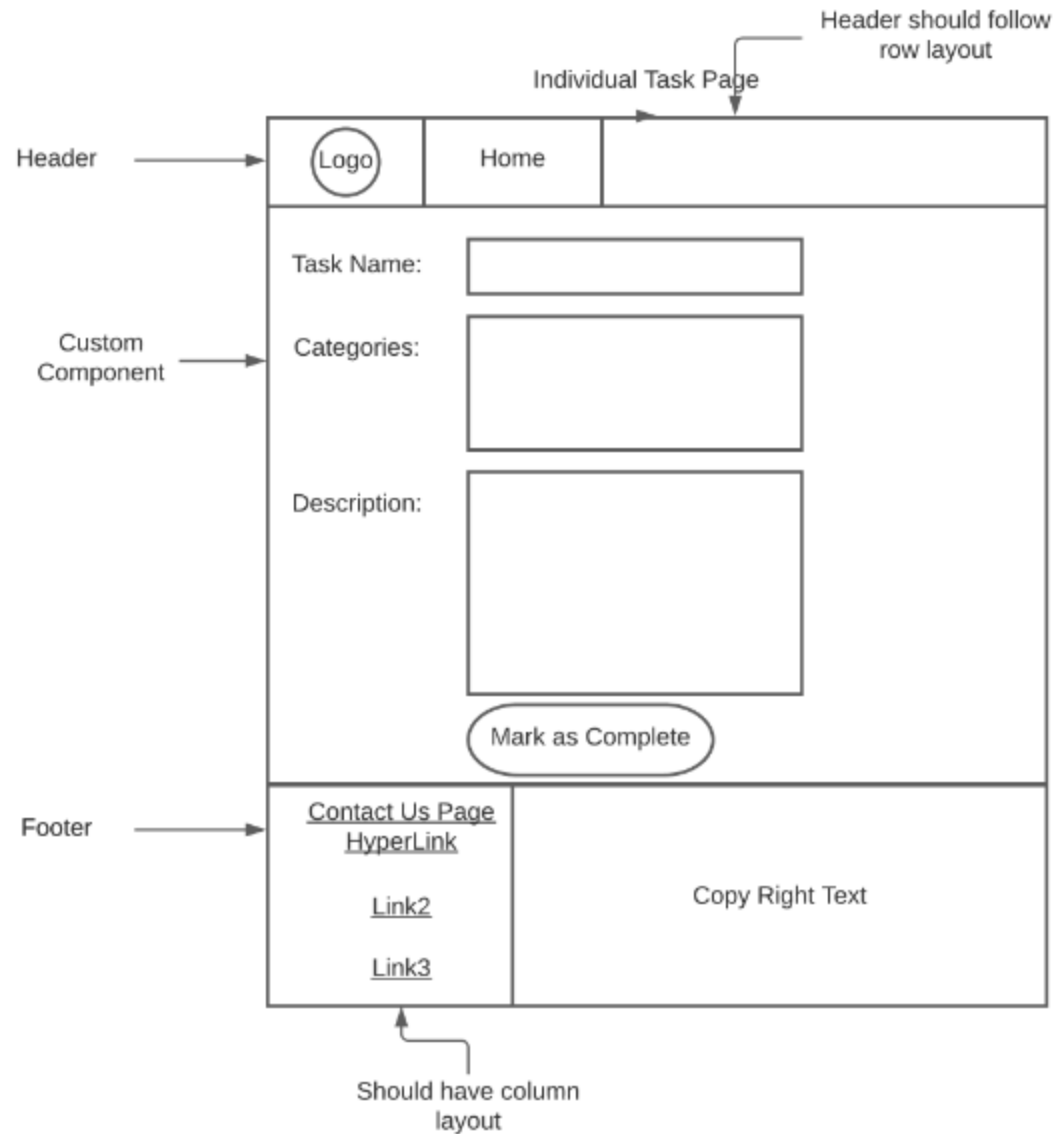

Note: Make use of AEM Templates, Components, AEM Sling Models/Servlets.
